

WORLD'S FIRST METHANOL-BASED CLEAN HEAVY DUTY ENGINE

Dor is proud to present an innovative solution in the transportation and heavy duty engines sector: A 100% clean Methanol propulsion engine, as an alternative to diesel fuel. The engine is used for trucks, buses, heavy mechanical equipment, vessels, as well as power generators and alike.

The heavy vehicles using diesel fuel are the main cause of pollution coming from transport. The use of methanol as a smart alternative to diesel fuel significantly decreases the amount of emission coming from vehicles, therefore, improves the environment and decreases air pollution level.

The benefits of using Methanol in heavy-duty engines:

- Decreased air pollution
- Decreased noise
- Decreased dependence on gasoline
- Low production costs
